Project Development Phase
Performance Test

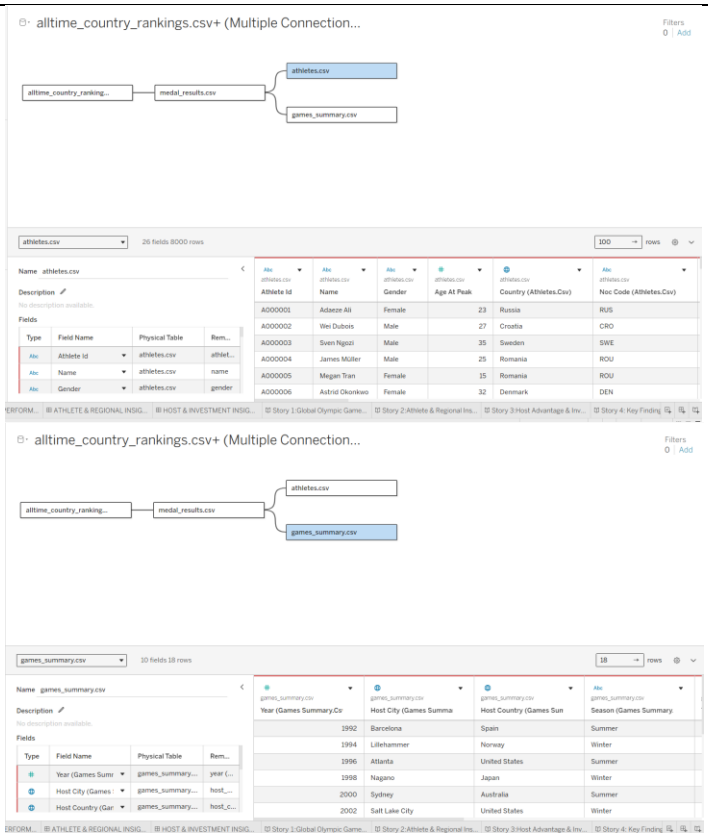

Date	28 October 2026
Team ID	EN25CS3010016
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	

Project Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	

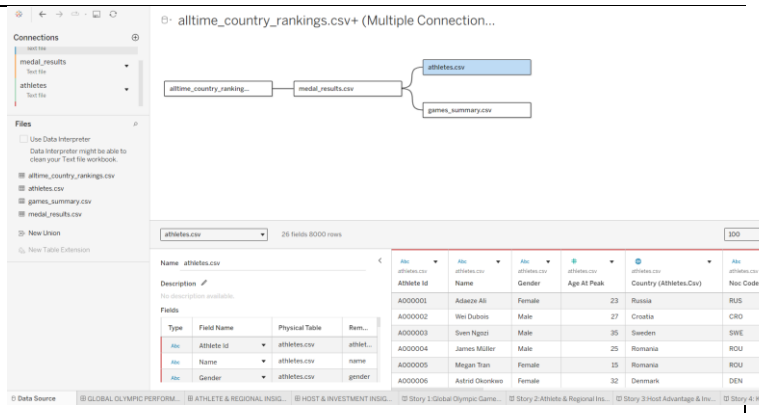

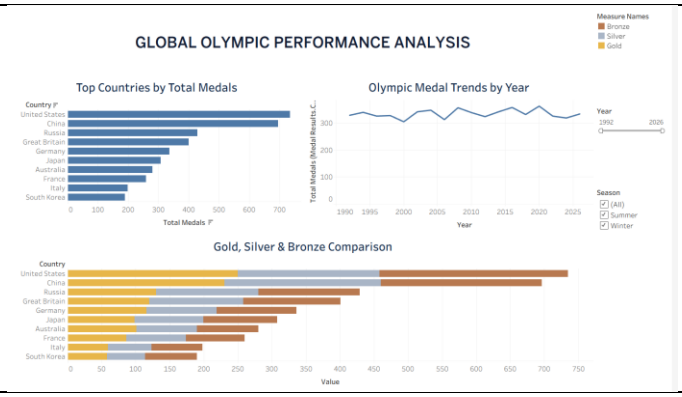

SMARTBRIDGE Let's Bridge the Gap
SKILL WALLET A SmartBridge Product

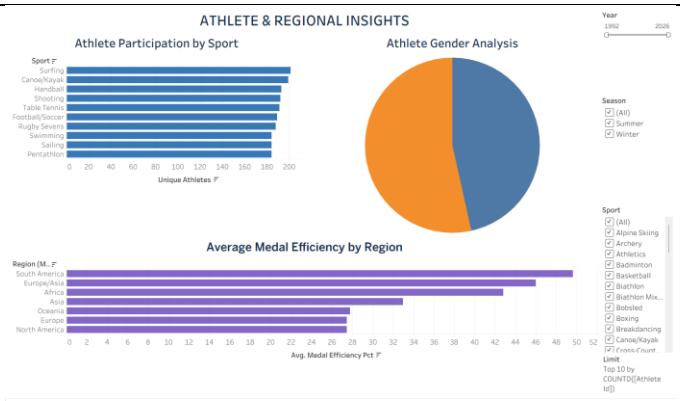

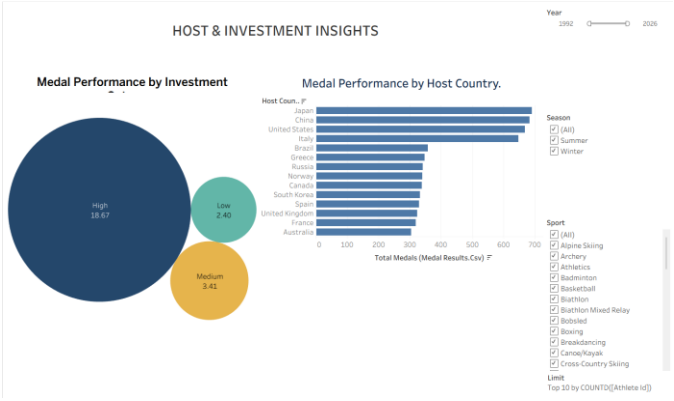

Four institutional CSV datasets were successfully connected to Tableau and their data previews were verified.

- **alltime_country_rankings.csv:** 60 rows and 13 fields
- **athletes.csv:** 8,000 rows and 26 fields
- **games_summary.csv:** 18 rows and 10 fields
- **medal_results.csv:** 910 rows and 19 fields

The datasets contain information about countries, athletes, Olympic games, host cities, sports, and medal results. The data previews display the available fields and sample records for each dataset. Relationships between the datasets were configured in Tableau to support integrated analysis and interactive visualizations.

2.	Data Preprocessing	 The four institutional CSV datasets were connected directly to Tableau. The field names, data types, and data previews were reviewed to prepare the data for analysis. • **Data Source Connection:** Four CSV datasets were connected to Tableau. • **Field Review:** Relevant fields, including country, athlete, region, year, sport, and medal-related fields, were reviewed. • **Data Relationships:** Relationships between the datasets were configured to support combined analysis across worksheets and dashboards. • **Analysis Preparation:** Relevant fields were used to build visualizations and interactive dashboards.
3.	Utilization of Filters	

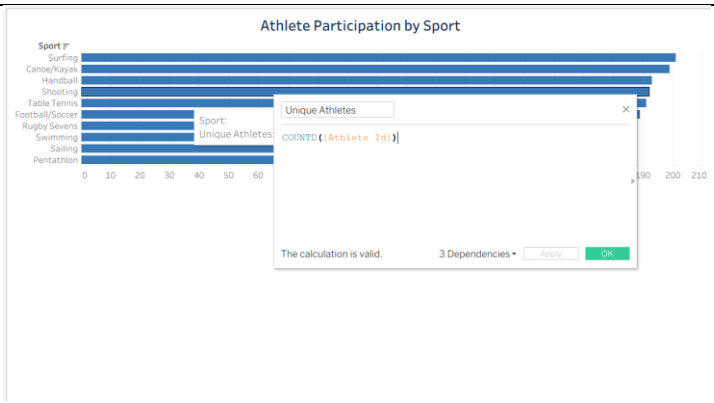

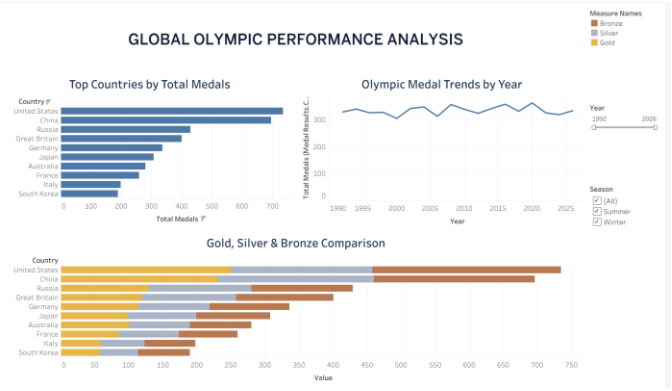

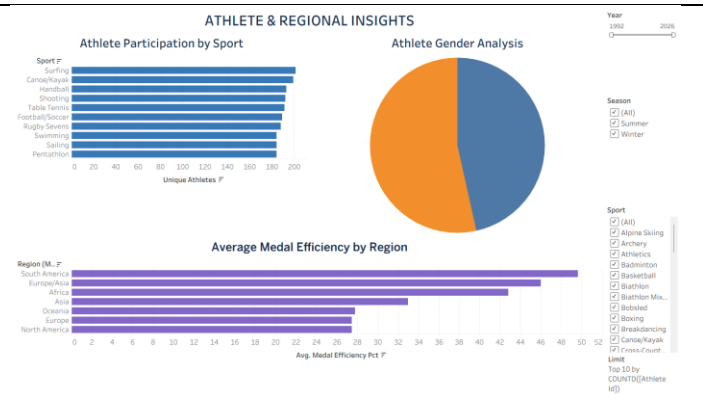

The Tableau dashboards include interactive filters to enable users to explore Olympic performance based on selected criteria.

- **Year Filter:** Allows users to view data for selected Olympic years.
- **Season Filter:** Allows users to explore Summer and Winter Olympic data.
- **Sport Filter:** Allows users to focus on specific sporting disciplines.

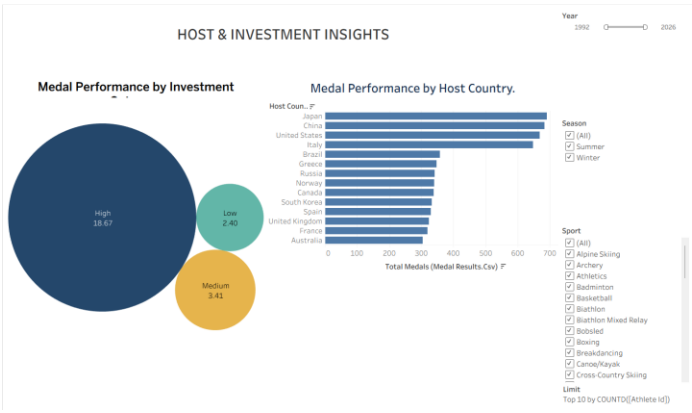

These filters make the dashboards more interactive and help users examine medal performance and athlete participation across different selections.

Output: The filter controls are displayed on the dashboard. Their behavior was tested by changing selections and checking the corresponding visualizations.

4.	Calculation fields Used	 One calculated field, `Unique Athletes`, was created for athlete-related analysis. • **Purpose:** To calculate the number of distinct athletes rather than counting repeated appearances as separate athletes. • **Application:** Supports analysis of unique athlete participation in the Olympic dataset. • **Validation:** The calculated field and its formula can be verified in Tableau's calculated field editor. **Output:** The calculated field supports athlete-related analysis in the project. **Formula:** Refer to the actual formula displayed in the Tableau calculated field editor.
5.	Dashboard design	Dashboard 1:  Dashboard 2:

Dashboard 3:

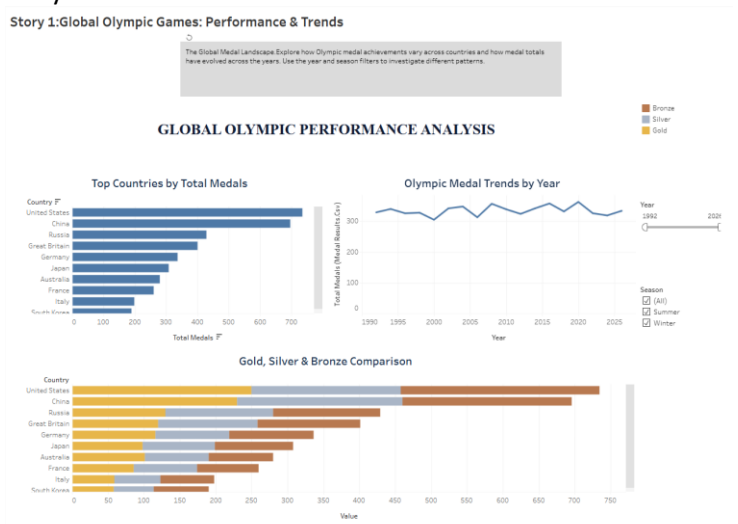

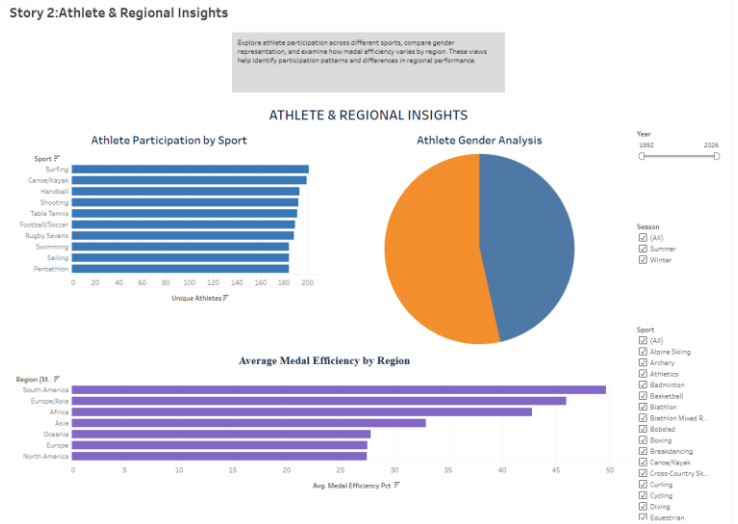

Three interactive dashboards were developed in Tableau for the Global Olympic Sports Performance Analysis project.

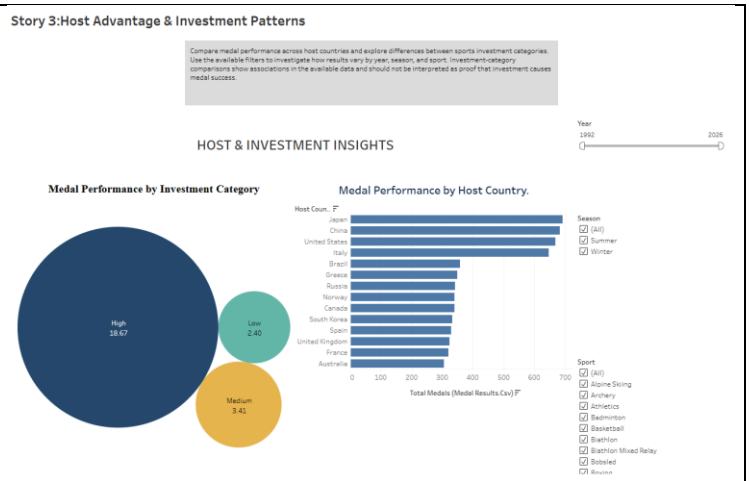

- **Dashboard 1 — Global Olympic Performance Analysis:** Presents top countries by total medals, gold/silver/bronze comparisons, and Olympic medal trends by year.
- **Dashboard 2 — Athlete & Regional Insights:** Presents athlete gender analysis, athlete participation by sport, and average medal efficiency by region.
- **Dashboard 3 — Host & Investment Insights:** Presents medal performance by host country and average medal count by investment category.

Total Worksheets / Visualizations: 8

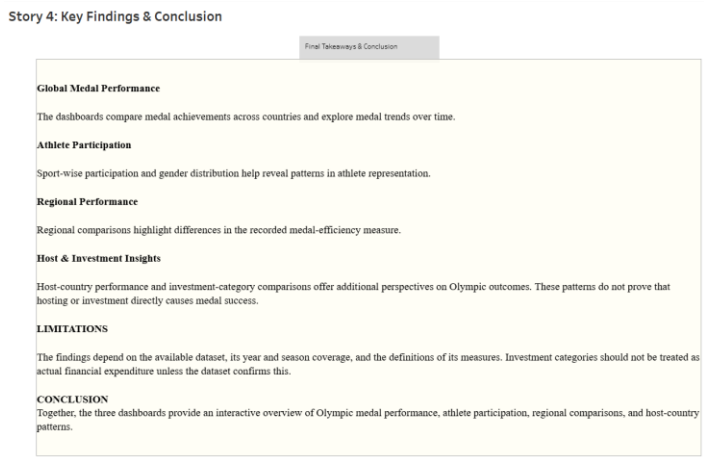

Total Dashboards: 3

The dashboards organize related visualizations into clear sections to support comparisons and exploration.

		Interactive Year, Season, and Sport filters are used where configured, allowing users to examine selected subsets of the Olympic data.
6	Story Design	Story 1:  Story 2:  Story 3:

Story 4:

A four-point Tableau Story was created to present the findings of the Global Olympic Sports Performance Analysis project in a structured sequence.

Story Points:

1. **Global Olympic Games: Performance & Trends** — Presents country medal rankings, medal-type comparisons, and Olympic medal trends over time.
2. **Athlete & Regional Insights** — Explores athlete gender distribution, participation by sport, and regional medal efficiency.
3. **Host Advantage & Investment Patterns** — Compares medal performance by host country and average medal counts across investment categories.
4. **Key Findings & Conclusion** — Summarizes the

		main observations from the project visualizations. **Total Story Points:** 4 **Outcome:** The Story combines the project's dashboards into a logical presentation, helping users navigate from overall Olympic performance to athlete insights, host and investment comparisons, and the final conclusions.
